Professional Experiences

Thales DMS

Software developer

Sophia | **Internship 6 month**
2025

As an intern at Thales Underwater Systems (now DMS), I had the opportunity to develop interactive modules for both the legacy and new versions of the Learning Management System (LMS) 'This Is Sonar' (TIS), covering various aspects of underwater acoustic propagation.

As a member of the Sonar Software Product (SSP) team, I collaborated with the GSS department on the mathematical aspects of the projects. For the legacy version of TIS, I used JavaScript, HTML, and CSS, while for the new version, I worked with ReactJS and TypeScript. I also integrated libraries such as P5JS and ThreeJS for 2D/3D visualizations, and ToneJS for acoustic simulations. Throughout the development process, I applied various design patterns to ensure code reusability, maintainability, and scalability. I had the opportunity to train various stakeholders on the operation of the interactive modules. The project was delivered on Bitbucket with up-to-date documentation for the legacy version of TIS, and separate documentation for the new version.

Thales Alenia Space

Software developer

Cannes | **Internship 5 month**
2023

As an intern in the IVVQ department at Thales Alenia Space, I had the opportunity to develop a tool for synthesizing the testing of satellite parts. The software was developed using a mix of C++ and Python, compiled using Cmake and installed using an automated installation script. It uses a 'Service Locator' design pattern, open source libraries and creates a report each time it is used to give engineers visibility of its execution.

I had the opportunity to train a team in the use of this software and to create full documentation.

Les Agences de Papa

Nice | Internship 6 month

System & network

2021

As an intern in the IT team, I had the opportunity to participate to the development of this service. I contributed to: the change of the internal Vlan of the company and the installation of firewalls.

I delivered a hardware/software inventory, procedures and workflows for the company's CRM.
