

Rémi Desbordes

Software Engineer

Passionate about high-constraint technological challenges, I am particularly interested in systems designed to operate in extreme environments. My goal is to contribute to space and aerospace projects that combine innovation, precision, and reliability.

Thales Digital Services

Bucharest | Currently

Software Test Engineer | Thales Alenia Space

2026

As part of the C02M project within the Copernicus program, I contributed to the development and maintenance of unit tests for the embedded software operating the satellite payload. This software is essential for ensuring the proper functioning of the sensors and the management of the data collected to monitor CO2 emissions from space.

My role involved designing, implementing, and updating automated tests to ensure the robustness, reliability, and quality of the embedded software. These tests help quickly detect anomalies, secure software updates, and verify compliance with mission requirements.

This work led to the identification of critical bugs before the validation phases and helped achieve the ESA coverage objectives: 100% Statement/Block coverage and over 80% MCDC (Modified Condition/Decision Coverage).

Thales DMS

Valbonne | 6 month

Software developer

2025

As an software developer at Thales Underwater Systems (now DMS), I had the opportunity to develop interactive modules for both the legacy and new versions of the Learning Management System (LMS) 'This Is Sonar' (TIS), covering various aspects of underwater acoustic propagation.

As a member of the Sonar Software Product (SSP) team, I collaborated with the GSS department on the mathematical aspects of the projects. For the legacy version of TIS, I used JavaScript, HTML, and CSS, while for the new version, I worked with ReactJS and TypeScript. I also integrated libraries such as P5JS and ThreeJS for 2D/3D visualizations, and ToneJS for acoustic simulations. Throughout the development process, I applied various design patterns to ensure code reusability, maintainability, and scalability. I had the opportunity to train various stakeholders on the operation of the interactive modules. The project was delivered on Bitbucket with up-to-date documentation for the legacy version of TIS, and separate documentation for the new version.

Thales Alenia Space

Software developer

Cannes | 5 month

2023

As a software developer in the IVVQ department at Thales Alenia Space, I had the opportunity to develop a tool for synthesizing the testing of satellite parts. The software was developed using a mix of C++ and Python, compiled using Cmake and installed using an automated installation script. It uses a 'Service Locator' design pattern, open source libraries and creates a report each time it is used to give engineers visibility of its execution.

I had the opportunity to train a team in the use of this software and to create full documentation.

Les Agences de Papa

System & network

Nice | 6 month

2021

In the IT team, I had the opportunity to participate to the development of this service. I contributed to: the change of the internal Vlan of the company and the installation of firewalls.

I delivered a hardware/software inventory, procedures and workflows for the company's CRM.
